The history of our family business

1948

Franz Zingerle, a trained machinist, founds a company: Zingerlemetal, Mastertent's parent company, is born.

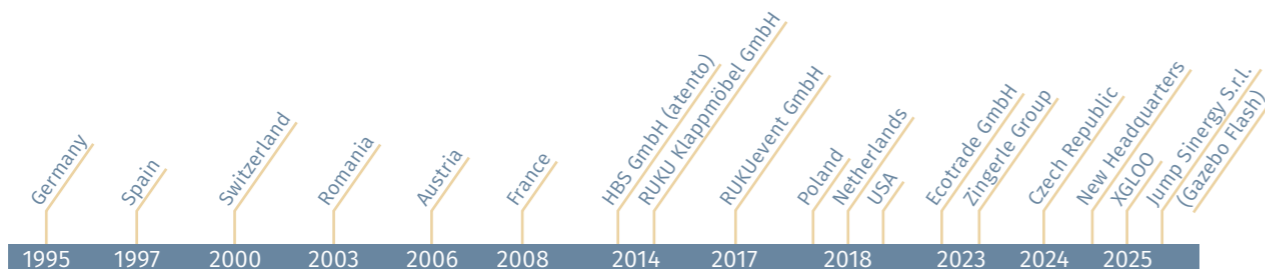

1984-2018

His sons Martin and Georg Zingerle join the family business and run it together for 34 years.

from 1995

Numerous foreign branches and new production sites are established.

2018

The transition to the 3rd generation: Martin Zingerle leaves the company. Georg's sons Thomas and Stefan, and daughter Sonja join the family business.

2019

Georg S. and Heinz P., two long-time employees and members of the management, become shareholders of the company.

2003

Expansion of the headquarters: a production hall of 7,000m² and an office building of 1,200m² are built in South Tyrol, Italy.

2006

A second production facility in Transylvania, Romania is built.

2025

New headquarters: 11,300 m² of optimised space designed for efficient production and smooth workflows, just a few kilometres from our previous site.

Today

The Zingerle Group's brands include Mastertent®, Ecotent® and RUKU1952®, part of the portfolio since 2023. In 2026, the portfolio is expanded with Aerise® for inflatable tents.

Mastertent[®] worldwide

At Mastertent[®], there is not just one contact person. Partners and subsidiaries in over 38 countries do their best to be there for their customers on site, every day.

Headquarter &
Production

In the countries marked in dark blue
Mastertent[®] sales representatives are on site.

Why you should choose us

9 Reasons for Mastertent[®]

1. In-house product development and production in South Tyrol, Italy.
2. High product quality and wide product range.
3. Sustainable company management in the third generation.
4. Individual customer support on site thanks to global sales structures.
5. Fast delivery, reliable and worldwide.
6. Unique services: CARE and CARE+.
7. 15-year spare parts guarantee on the aluminium structure.
8. International certifications and patents.
9. There are no limits to personalisation, customised products are one of our strengths.

Quality since

1948

Made in Europe

15 years
Spare parts guarantee

Fast delivery

As a producer we consciously implement measures to avoid negative effects on the climate.

We use high-quality materials in order to reduce big amounts of waste and this in turn helps us to increase our product longevity. The usage of recyclable materials and the continuous process optimisation, including the reduction of harmful substances and waste, are of great importance to us.

We even produce colourful shopping bags with fabric remnants of our gazebos which are used to raise awareness of this issue.

All Mastertent® products are 100% recyclable.

Renewable energy

Our company headquarters in South Tyrol is powered by our own photovoltaic system, allowing us to save an average of **250 tonnes of CO₂ each year**.

Saving CO₂ thanks to district heating

The district heating network of the municipality, which is using wood chips, covers the entire heat demand of our headquarters in Italy.

All-round protection guaranteed

Sidewalls

Closed
100 % waterproof and windproof

With door
Can be rolled up, with zipper

With window
1-4 windows per sidewall

Half-height
Fixed with aluminium crossbar

Wooden counter
Combinable with half-height sidewalls

Night closure
Closes the upper part of the half-height sidewall.

Partition wall
Closed, with window or with door

Rescue
Special sidewalls strengthened with PVC

With our 8 gazebo sidewall models you can quickly adjust your gazebo according to your needs or the changing weather conditions.

Simple and completely automatic

Awning

1. Automatic opening

When setting up the tent, the awning opens by itself.

2. 1-4 Sides

Depending on the model, one, two, three or four sides can be equipped with an awning.

3. Internal valance

The internal valance provides an additional printable area and sidewalls can be attached to it.

4. Extended protection

Our patented automatic awning reaches out 65 cm/80 cm/100 cm depending on the model.

Made in Europe

Interested in how a folding gazebo is made?
Watch the production video now!

100 % visibility is guaranteed

Pagoda gazebo

1. Maximum visibility

Due to the high and pointed roof, the pagoda gazebo is already visible from afar.

2. High gable

The centre post is secured by an additional safety bolt.

3. Increased stability

The scissor joints on the sides give the 5x5 m pagoda gazebo extra stability.

4. Handy

Small pack size, no loose parts and quick set-up.

*Bulky was yesterday,
foldable is today.
Watch the video!*

3 x 3

4 x 4

5 x 5

An unusual pagoda gazebo: it offers a compact packing size, easy transport, quick set-up and no loose parts. That's something only Mastertent® can offer you.

Extraordinary shapes

Square 3x3 m

1. Eye-catching design

This is the perfect gazebo for advertising, attracting customers and delivering meaningful messages.

2. Bigger valance

Use an advertising space of 1.7 m² instead of the usual 0.8 m².

3. Water drain pipe

Rainwater is collected in the middle of the roof and drains off through the drain pipe that can be positioned as desired.

4. Awning

The new Square gazebo with awning offers your guests a bigger sheltered area.

That's how quickly the Square with awning is ready for use. Roll the film!

More customisable surface on a 3x3 m gazebo is not possible! The Square with or without the awning is your mobile advertising medium, regardless of the application.

About proven things and new ones

Fabrics and colours

The classic

Our all-time favourite Oxford fabric

PIRONEERING THE FUTURE

The Premium Fabric

Demonstrated pioneering spirit

Innovation and resilience

Adaptable, resistant and durable. We have taken nature as our model and developed the **worldwide unique fabric Pirontex®** together with our textile manufacturer. Pirontex® is more sustainable in its production than conventional textiles and is characterised by its longevity.

A higher elasticity ensures that the fabric adapts perfectly to the aluminium structure. Thanks to the use of a 600D thick thread as well as the ingenious construction of the fabric, the textile gets more body and robustness **and retains its shape for longer**. Special nano-coatings make the fabric particularly resistant to dirt and water. Furthermore, it can withstand winds of up to 100 km/h and is fire-retardant. The Pirontex® thread is already treated with a fire-retardant agent - a more sustainable and efficient alternative to fire-retardant coatings.

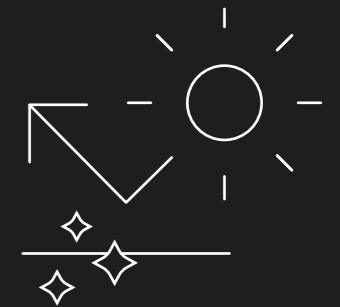

Unbreakable colours

Colour resistance

What makes this textile so special? Even when exposed to intense sunlight and used for long periods of time, it retains its original colour and does not fade.

This is proved by its high lightfastness, which was classified with a 7-8 grade (out of 8). Thus, Pirontex® guarantees **excellent long-term colourfastness**.

The Pirontex® fabric also distinguishes itself by its **elegant, matt appearance**, it is extremely tear-resistant, it keeps its shape and protects against UV radiation.

For the world of tomorrow

Sustainability is not a state, but a path

The traditional dyeing process used in the textile industry causes a particularly high environmental impact.

For the production of Pirontex®, an innovative method called solution dyeing is used. This method reduces energy consumption by fifty percent, water usage by eighty percent and CO₂ emissions by sixty percent.

It is not only more sustainable but also makes the colour significantly more durable.

Impressive results

Printing options

For the small areas

With thermal transfer printing, small print motifs, such as logos, are printed on a very durable vinyl film and transferred to the gazebo's fabric by heat.

Sublimation printing on valances

From one corner to the other

Sublimation printing is particularly suitable for printing high-resolution motifs on large surfaces. For printing, we use certified eco-inks that are not harmful to the environment or our health.

To the 3D Experience

Construction details

Easy set-up mechanism

Thanks to the integrated easy set-up mechanism of the tent legs, the tent can be assembled quickly and without effort.

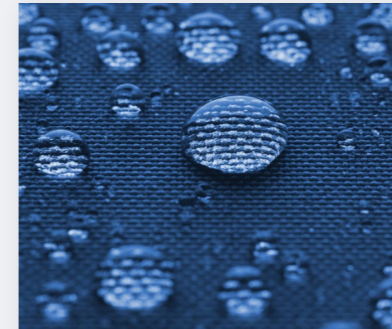

Spacer

The 8 mm thick spacer ensures that the fabric is not pinched when folding up the gazebo.

Release system

This system helps to easily dismantle the gazebo by means of a push button.

Textile characteristics

The textiles are made of polyester fabric coated with polyurethane, they are UV-resistant and 100% waterproof.

Roof fixing system PRO

This fixing system on the corner posts ensures a crease-free appearance of the entire tent roof.

Valance tensioning device

The Series 1 is equipped with a patented, spring-loaded tensioning device. The roof therefore remains taut even after a long time.

Connecting elements

All connecting parts are made of extruded aluminium which, compared to plastic, makes them more form-stable.

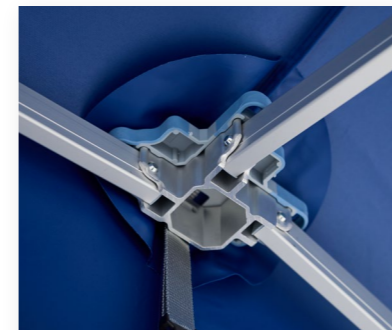

Plastic gliders

All movable components are provided with a plastic glider which ensures a very smooth operation.

Rubber covers 2.0

The connecting elements are equipped with round ed rubber covers that provide improved protection for the fabric against friction and wear.

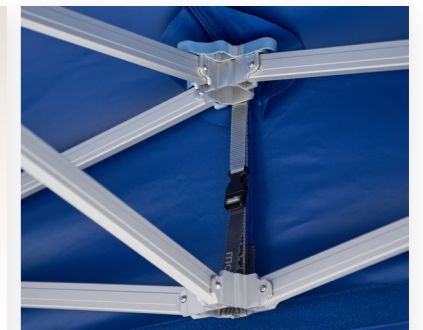

PVC reinforcement

To avoid rapid wear of the fabric, the tent roof is equipped with PVC reinforcements at all contact zones with the frame.

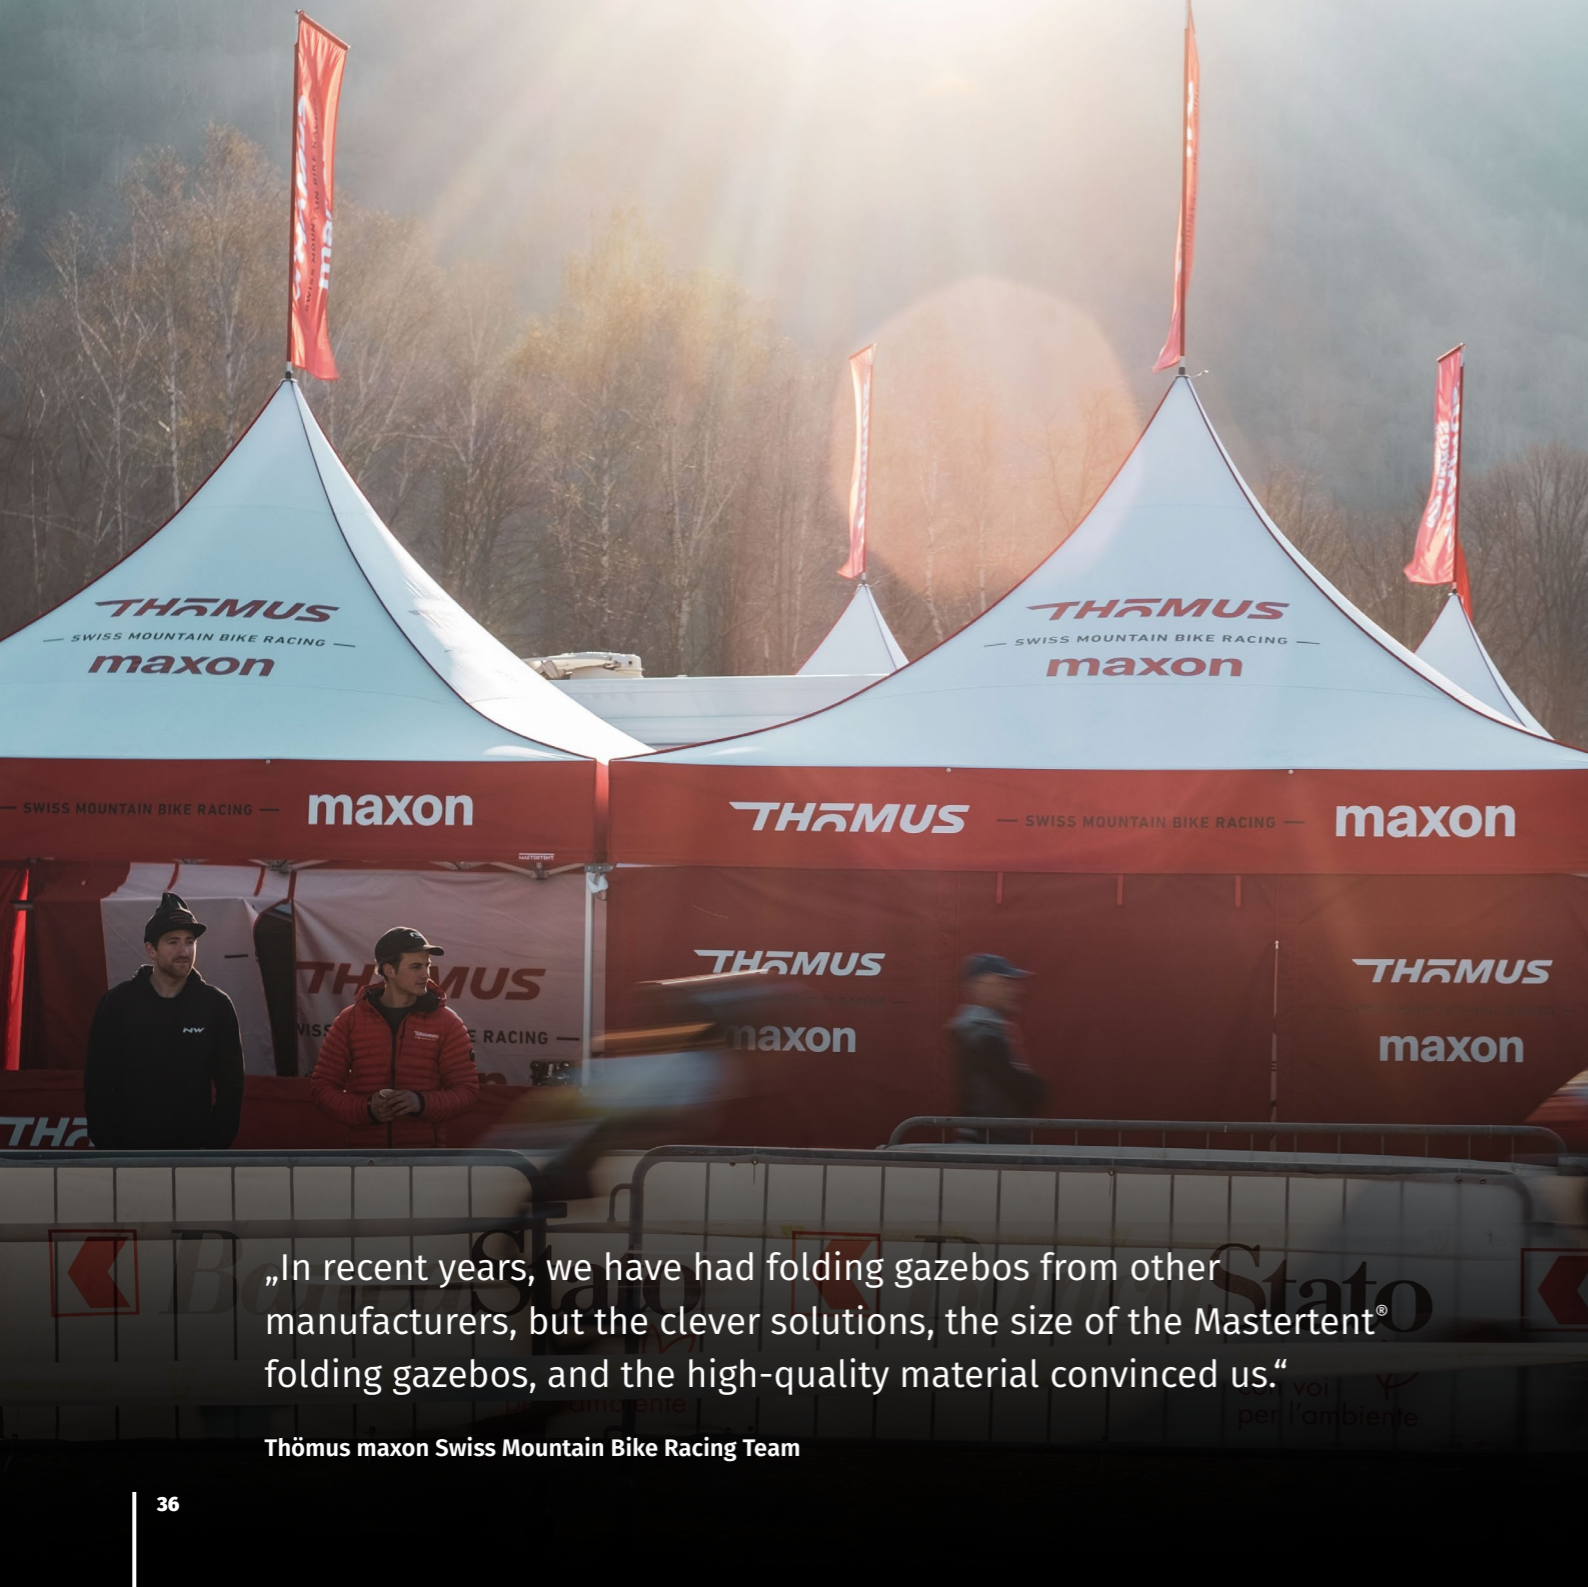

Peak flag

On the patented peak flag device flags or banners can be mounted and at the same time, it firmly attaches the roof to the structure.

Adjustable tension straps

These straps on the roof's valances ensure the perfect tensioning of the valances on all sides of the roof.

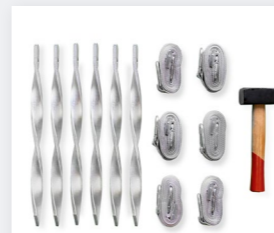

„In recent years, we have had folding gazebos from other manufacturers, but the clever solutions, the size of the Mastertent® folding gazebos, and the high-quality material convinced us.“

All-in-one solutions

Gazebo sets for all types of use

1. Kitchen Tent

The roof and sidewalls of this gazebo are made of a certified, fireproof fabric which turns it into the perfect outdoor kitchen.

2. Rescue Kit

Quick set-up, stable, 100% waterproof, fire-retardant and practical - that's the Rescue Kit, the reliable partner for emergency situations.

3. Royal Kit

This elegant folding gazebo package with corner curtains, a sheer ceiling fabric and scalloped valances has always been very popular in the catering trade.

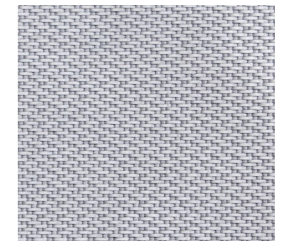

4. Loden Kit

Give your gazebo an alpine touch with this loden fabric cover.

*100% tailored
to your mobile needs.*

Tested, certified and refractory

Safe cooking with Mastertent®

To all cooks out there: The Mastertent® kitchen tent is made of a refractory, non-flammable fabric and the windows can be opened and closed by means of a zip. In addition, there are two dormers on the roof so that air can escape while cooking.

3 x 1.5

4 x 2

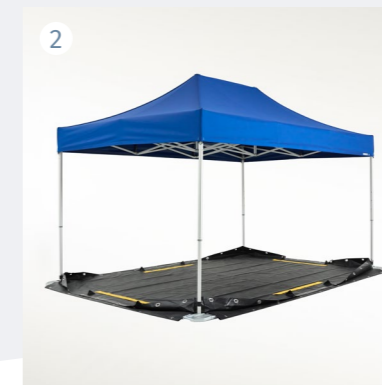

NEW

The proven Rescue Kit has been further developed, delivering even greater stability, functionality and reliability.

Developed for emergencies: Rescue Kit

Fast, simple and safe

1. Sidewalls

These sidewalls include a window, door and fly net.

2. Anti-slip floor

A waterproof floor made of anti-slip PVC provides the necessary hygiene in the gazebo.

3. Eyelet system

Easy connection of the sidewalls to the ground using an eyelet fastener that makes the gazebo completely waterproof.

Friend and helper for first responders

Our rescue tents are waterproof and ready for use in just a few minutes. They are 100 % reliable when every second counts.

Take precautions and be covered

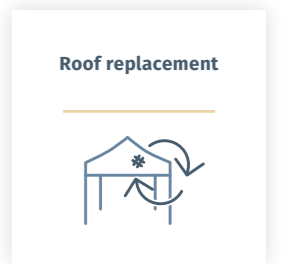

The CARE Packages

Storms, uprooted trees, fires or floods - the dangers lurk everywhere and they can leave enormous damage even to the most stable Mastertent® folding gazebo.

We do not want you to pay high repair costs. In the event of damage due to force majeure, you can now make use of CARE and CARE+. These are two risk provisions that offer further advantages in addition to low repair costs.

You can count on the following benefits, no matter what you choose:

- You save high repair costs
- 70 % discount on the item to be replaced
- You receive one free Repair Kit for the tent roof per contract term.
- Rapid replacement service
- Priority customer support

This is where the two service packages differ:

CARE

Basic package

Unlimited roof replacement with low deductible

A one-off, low service fee (per contract period), no matter how often you replace the roof

CARE+

Comprehensive package

Unlimited replacement of the roof, the aluminium structure or its individual parts with low deductible

A one-off, low service fee (per contract period), no matter how often you replace the roof, the aluminium structure or its individual parts

Square, Hexagonal and Octagonal

Stable Pavilions

Tool-free, quick and intuitive

Set-up in 15 minutes

Manufacturer

Easy-Up

Customisable

*Roll the film,
let's go!*

Thanks to the quick release technology, the Mastertent® pavilion can be assembled by two people in a very short time and without the use of any additional tools.

At a glance

Our pavilions

4-corner pavilion

Counter: up to 16 people
Weight: 221 kg
Sizes: 3.9 x 3.9 x 3.35 m

6-corner pavilion

Counter: up to 24 people
Weight: 357 kg
Sizes: 5 x 5.75 x 3.35 m

8-corner pavilion

Counter: up to 40 people
Weight: 402 kg
Sizes: 5.8 x 5.8 x 3.35 m

6-corner pavilion star-shaped

Counter: up to 24 people
Weight: 301 kg
Sizes: 6.35 x 7.35 x 4.5 m

4, 6 or 8 square pavilions.

First, the base frame is assembled, then the side panels as well as the counter elements are mounted. Last but not least the roof is put on. All this in just 15 minutes!

Folding gazebos

Warranty services

- 5-year warranty on material and production defects of the aluminium frame
- Lifelong warranty on corrosion of the aluminium frame*
- 15-year availability of all spare parts of the aluminium frame

*special cases excluded (e. g. frequent use of the gazebo in sea air)

General certifications

- All gazebos are TÜV certified (product certification).
- Our folding gazebos have been tested for their stability in a wind tunnel at different wind speeds by the renowned Maffei Engineering office. The result: when properly secured, the 3x3 m folding gazebo can withstand wind speeds of up to 100 km/h.
- Flying Structures Certificate: In 2022, the Strauch engineering office confirmed on the basis of a structural static calculation that our folding gazebos meet the requirements according to DIN EN 13782 .
- The printing ink we use for our gazebos has been certified with the ECO Passport.
- All materials and substances we use for the production of our folding gazebos are REACH-compliant and are therefore considered harmless to health.
- ISO 9001 company certification: It ensures product quality, company reliability and a continuous commitment to improvement in order to offer the best possible service.

Certifications of our tissues

- Our textile Oxford 500D has been assigned to the B - s1, d0 fire protection class according to EN 13501 1:2018 + A1:2009, and is therefore considered fire retardant. Moreover, it has a water column of 2,000 mm.
- Our textile Oxford 250D has been assigned to the B - s1, d0 fire protection class according to EN 13501 1:2018 + A1:2009. and is therefore considered fire retardant.
- Glass fibre fabric: The Bergmeister engineering office tested our kitchen tent and confirmed that its fabric is refractory and the product is therefore suitable as a temporary kitchen for outdoor use. The textile consists of a tightly woven, tear-, water- and wind-resistant refractory glass fibre fabric.
- The „Crystal“ PVC for our folding gazebo windows has been assigned to the B - s2, d0 fire protection class according to EN 13501 1:2018 and is therefore considered flame retardant.
- The PVC for our folding gazebo roofs and sidewalls has been assigned to the B - s2, d0 fire protection class according to EN 13501 1:2018 and is therefore considered flame retardant.
- All our tent fabrics offer UPF>50 UV protection.

- Pirontex®: This textile has a very high blue scale (7-8 of max. 8), as well as grey scale (4.5 of max. 5), according to DIN EN ISO 105-B02 and DIN EN ISO 105-A02, which means that it is very colourfast. It is also very hard-wearing, has high dimensional stability and has been classified as flame retardant in accordance with DIN EN 13501 -1:2018 (fire protection class B - s1, d0). Moreover, it has a water column of 5,000 mm.

All original certificates are available on request.

Warranties and certifications

Pavilions

Warranties

- 2 years manufacturer's warranty on material and production defects of the galvanised steel structure.
- 10 years availability of all spare parts of the galvanised steel structure.

Certifications

- TÜV-SÜD certificate (product certification).
- The PVC fabric is considered flame retardant according to EN 1305 1:2018.
- Certification of stability at varying wind speeds.
- Static calculation of the steel structure.
- All materials and substances we use in the production of our pavilions are REACH compliant and are therefore considered harmless to health.
- The printing ink we use for our fabrics has been certified with the ECO Passport.

Stable

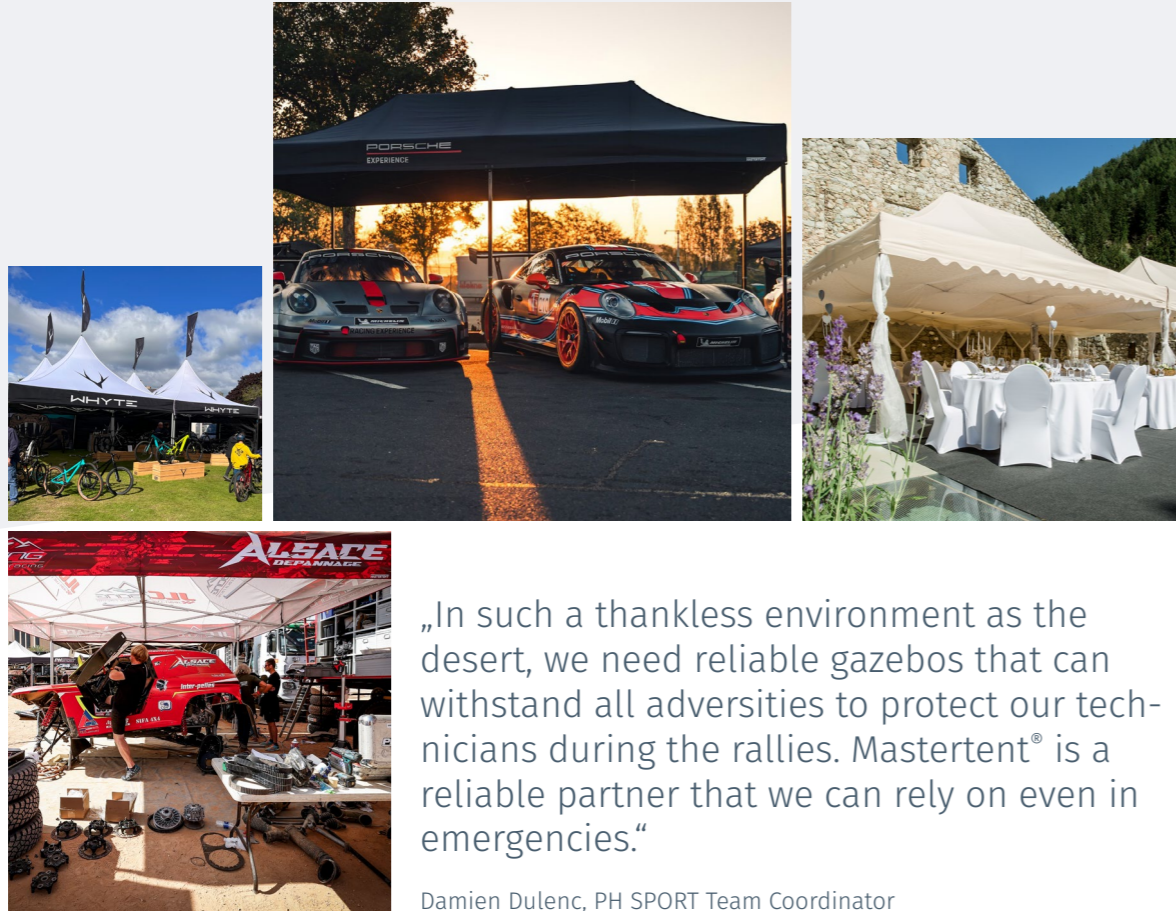

TÜV-certified

All certificates are available on request.

If our customers are satisfied,
we are satisfied as well.

„In such a thankless environment as the desert, we need reliable gazebos that can withstand all adversities to protect our technicians during the rallies. Mastertent® is a reliable partner that we can rely on even in emergencies.“

Damien Dulenc, PH SPORT Team Coordinator

„I was on the hunt for a high quality canopy that is well made and will last my business for years to come. What I received from Mastertent® is of super quality - it definitely exceeded my expectations.“

Anako, USA, Los Angeles
